

PSC SC CLERK'S OFFICE

June 15, 2020

THE HONORABLE JOCELYN BOYD
Chief Clerk and Administrator
South Carolina Public Service Commission
101 Executive Center Drive
Suite 100
Columbia, South Carolina 29210

Docket No. 2019-227-E & 2020-11- E Order No. 94-348 & 98-502

Dear Jocelyn Boyd:

Pursuant to Docket No. 2019-227-E & 2020-11-E, Order No 94-348 & 98-502, please find enclosed (2) copies for filing Lockhart Power Company's **2020 INTEGRATED RESOURCE PLAN**.

Sincerely,

James H. Seay, Jr.

Manager - Engineering & Regulatory Affairs

ame H. Swy of.

Lockhart Power Company

cc: Office of Regulatory Staff

SC Energy Office

INTEGRATED RESOURCE PLAN

LOCKHART POWER COMPANY

INTEGRATED RESOURCE PLAN

1	CT A TI	EMENT	OF	ND	TEC	TTT	71
1.	SIAII		Or.	OD	JUL	, 4 1 1	L

Lockhart Power Company's (LPC) objective in developing an Integrated Resource Plan (IRP) is to minimize our long run total costs and produce the least cost to our customers consistent with the availability of an adequate and reliable supply of electric energy while maintaining system flexibility and considering environmental impacts. We intend for the plan to also improve customer service, offer additional customer options, and improve efficiencies of energy usage.

2. RELEVANT SUPPORTING DOCUMENTATION

a. See ATTACHMENTS

- 1 --- SUPPLY RESOURCES
- 2 --- DEMAND FORECAST
- 3 --- SUPPLY AND SALES FORECAST
 - 4 --- ENERGY PRODUCED FROM ALL ENERGY RESOURCES
- 15 5--- PLANNED ELETRICAL TRANSMISSION INVESTMENTS

3. SUPPLY RESOURCES

LPC presently utilizes ten sources of supply, including nine generation stations and purchases from Duke Energy (See Attachment 1). More than 99% of the power LPC self-generates is renewable energy. LPC utilizes a firm wholesale PPA with Duke Energy to provide its generation needs beyond the amount it self-generates. LPC generates approximately one-quarter of its own load with renewable energy with the remainder purchased from Duke Energy (See Attachment 4). Duke Energy's rates to LPC are

1		presumptively just and reasonable, having been permitted by the FERC. We plan to							
2		continue to use Duke Energy to provide a firm load-following supply for the foreseeable							
3		future. However, LPC intends to investigate other sources to determine if the costs and							
4		benefits, both short run and long run, meet the objectives of our IRP. The sources w							
5		intend to investigate include, but are not limited to the following:							
6		GENERATION Additional cost effective renewable energy generation resources							
7		cost effective natural gas generation resources.							
8									
9	4.	VARIOUS ENERGY AND DEMAND ALTERNATIVES, EFFICIENT ENERGY							
10		CHOICES AND PROPER PRICING SIGNALS							
11		LPC has done and continues to do the following:							
12		A. Designed its rates to economically encourage improved load factors and							
13		to reduce monthly demands by:							
14		1. Incorporating a demand penalty by use of a demand ratchet							
15		in its residential rates. This encourages peak shaving.							
16		2. Dividing its commercial and industrial rates into a first 200							
17		hours use of billing demand rate and an over 200 hours use of							
18		billing demand rate with the rates in the latter considerably less							
19		expensive than the first 200 hours use block. This encourages peak							
20		shaving.							
21		3. Incorporating conservation requirements in its Residential -							
22		All Electric and General Service - All Electric rates. This							
23		encourages conservation.							
24		4. Designing its Residential and Residential - All Electric							
25		rates such that they are identical during the summer months, the							
26		season of LPC's system peak. This encourages peak shaving and							

conservation.

1		5. Designing its General Service Commercial and General
2		Service - All Electric rates such that they are identical during the
3		summer months, the season of LPC's system peak. This
4		encourages peak shaving and conservation.
5		6. Converting its Residential rate and Residential - All
6		-Electric rate (summer months) from a declining block rate to an
7		inverted rate. This encourages conservation.
8		7. Designing a Solar rider for its residential customers
9		
10	5.	EVALUATING POTENTIAL OPTIONS
11		LPC will employ unbiased analysis techniques for potential options included in its IRP.
12		LPC will evaluate each option by including all appropriate costs and benefits and will
13		provide a detailed explanation with supporting evidence for our choice.
14		
15	6.	EVALUATING THE COST EFFECTIVENESS OF SUPPLY-SIDE AND
16		DEMAND SIDE OPTIONS
17		LPC has adopted an interruptible service demand-side management program offered by
18		Duke Energy. Currently approximately one-fourth of LPC's industrial customers are
19		enrolled in the program. This program encourages peak shaving.
20		
21	7.	MEASURE OF NET BENEFITS
22		LPC will provide the net benefits resulting from the options chosen for use, keeping
23		within the objective stated in Section 1. Benefits are considered to be, but are not limited
24		to, cost savings, peak load shaving, conservation, load shifting, valley filling,
25		environmental concerns, improvement of customer service, offering of additional
26		customer options, improved efficiencies of energy usage, and improved outage times and
27		reliability, and economic development impact on the community.
28		

1	8.	ENVIRONMENTAL COSTS
2		LPC will consider environmental costs on a monetized basis where reasonable and
3		sufficient data is available in its planning process and evaluation of options. Those
4		environmental costs that cannot be monetized will be addressed on a qualitative basis
5		within the planning process and evaluation of options. The environmental costs referred
6		to here are those costs associated with demand or supply side options which impact the
7		customer directly or indirectly.
8		
9	9.	DEMAND AND ENERGY FORECAST
10		See Attachments 2 and 3
11		
12	10.	EVALUATION AND REVIEW OF EXISTING DEMAND-SIDE OPTIONS
13		See Section 4 Above
14		
15	11.	FUTURE STUDIES
16		LPC continues to evaluate potential renewable energy initiatives and other potential
17		supply-side opportunities. In particular, as the cost of solar generation equipment
18		continues to drop, potential opportunities to cost-effectively provide smaller utility-scale
19		solar power for our coustomers will continue to be studied.
20		
21	12.	FLEXIBILITY AND QUICK RESPONSE
22		LPC intends to remain flexible enough to react quickly to changes in a manner consistent
23		with minimizing costs while maintaining reliability.
24		
25	13.	PLANNED ELECTRICAL TRANSMISSION INVESTMENTS
26		LPC is committed to maintenance and improvement of the tranmission system by making
27		investments in short and long term capital budgeted projects as seen in ATTACHMENT
28		5.

1		
2	14.	THIRD PARTY POWER PURCHASES
3		LPC will investigate other purchase sources if the occasion arises and is willing to pursue
4		any other purchase sources to determine if the costs and benefits, both short run and long
5		run, provide our customers with the options consistent with our IRP objective.
6		
7	15.	NEW TECHNOLOGIES
8		LPC will continuously evaluate, pursuant to its IRP objective, new technology for both
9		demand-side and supply-side options. In addition to advances in solar generation
10		technology, Lockhart Power Company keeps up-to-date on advances in hydrokinetic and
11		similar technologies that could one day be cost effectively deployed in existing water
12		conveyances.
13		
14	16.	FUTURE SUPPLY-SIDE OPTIONS
15		LPC presently has no certain scheduled supply side options other than those described in
16		Section 3. LPC is monitoring development of the solar generation market in South
17		Carolina, including proposed legislative changes, and will respond to any changes in a
18		manner that is cost effective and appropriate for its customers.
19		
20	17.	CAPTURING LOST OPPORTUNITY RESOURCES
21		LPC gives attention to capturing lost-opportunity resources which include cost-effective
22		energy efficiency savings such as in new construction, renovation, and in routine
23		replacement of existing equipment. In routine replacement of any and all equipment,
24		LPC includes energy and efficiency savings as a component of evaluation.
25		
26	18.	DYNAMICS OF IRP PROCESS
27		LPC realizes that the IRP process is dynamic and that modifications may be necessary

over time. As new issues arise, existing issues or components of the plan change in

significance and improved analysis techniques developed; LPC intends to file revisions to
its IRP with The Public Service Commission of South Carolina and request that the
Commission incorporate the revision into LPC's IRP or approve it as a separate
consideration.

Supply Resources

Facility Name	Location	Nameplate Capacity	Rate Base?	Fuel Source				
Lockhart Hydro	Lockhart, SC	18 MW	Yes	Water (Non- Consumptive)				
Lower Pacolet Hydro*	Pacolet, SC	0.8 MW	Yes	Water (Non- Consumptive)
